Álvaro Antonio Sandrea Guerrero

Zulia, Venezuela · linkedin.com/in/alvarosdev · alvarosdev@gmail.com

Systems Engineering student and self-taught developer passionate about React, Next.js, and Tailwind CSS. Currently developing Servant Bible, a personal project aimed at offering a pleasant and efficient Bible reading experience, with persistent history, optimized search, and multiple versions. Focused on attention to detail, applying precise methods according to the use case, and ensuring the final product delivers real value to the user.

PROFESSIONAL EXPERIENCE

Servant Bible **Ciudad Ojeda,Venezuela**
Front-End Developer · Web platform with adaptive experience *January 2025-August 2025*

- Designed a web platform for Bible reading with adaptive experience, persistent reading history (LocalStorage), efficient search, and smooth navigation between chapters without redirects, prioritizing data efficiency and visual continuity.
- Implemented a visual architecture based on ShadCN UI, prioritizing reusable components and coherent proportions on large and mobile screens, with dark mode support without compromising readability.
- Worked on system modularity with a pragmatic approach, maintaining a scalable and extensible structure for future versions and contributions.
- Performed manual testing on multiple devices to ensure a robust experience without distortions, prioritizing usability
- Implemented smart consumption of external API for Bible versions, avoiding unnecessary overload and maintaining rendering efficiency.
- Identified areas for improvement such as SEO, internal component order, and advanced analytics, with plans to evolve toward a more complete and professional solution.

Yariz Eats **Ciudad Ojeda,Venezuela**
Frontend Developer · Mobile App with Modular Visual Architecture *July 2025–August 2025*

- Joined a startup to support the development of a delivery app similar to UberEats in React Native with Expo, joining three weeks before the final delivery.
- Took charge of the store's visual section, connecting efficiently and securely with our internal API, prioritizing clarity in data flow and information integrity.
- Implemented circular charts with integrated loading bars to visualize key metrics such as sales, deliveries, cancellations, and commercial activity, accurately recreating Figma designs and building functional custom components.
- Added views for store profile, product management, active orders, and ongoing deliveries, adapting to challenges and creating visual solutions on the fly when necessary.
- Worked in a team using GitHub as a collaborative environment, maintaining a modular structure and segmented requests to facilitate maintenance and scalability.
- Conducted client testing on multiple devices, iterating on the visual experience to avoid distortions and ensure functionality under time pressure.
- Took direct communication with the client due to internal disorganization, prioritizing their satisfaction and delivering a functional, clear, and ready-to-use section.
- Participated in production preparation, leaving the project in a functional state ready for pilot launch.

EDUCATION

Instituto Universitario Politécnico Santiago Mariño — **Ciudad Ojeda, Venezuela**
Systems Engineering — *May 2022 – Present*

COMPLEMENTARY TRAINING

- **Functional Graphic Design:** Occasional experience in personal visual marketing projects, focusing on basic composition, style adaptation, and aesthetic coherence.
- **Technical English:** Fluent reading and solid understanding of documentation, forums, and technical resources. Ability to write and communicate ideas in writing; currently improving oral expression.
- **Client Communication:** Direct experience in cordial interaction and conflict resolution in development environments with low organization, prioritizing delivery and clarity.
- **Adaptability Under Pressure:** Ability to solve visual and technical problems in limited time, maintaining quality and functionality in final deliveries.
- **Remote Collaboration:** Effective work in distributed teams using GitHub and asynchronous communication tools.

SKILLS

- **React.Js and Next.js:** Development of modern, efficient, and adaptive interfaces.
- **Visual Design and Usability:** User-centered experience with intuitive navigation and coherent aesthetics.
- **Responsive Design:** All projects adapted to multiple devices, ensuring functionality and visual consistency.
- **Communication and Remote Work:** Effective coordination with distributed teams and direct client interaction.
